

## **Milestone 3 review summary CSC 648 Spring 2022 Sec-02**

**Team #: 3**

**Date: 4/5/2022**

### **Summary of feedback and tasks to do (1-2 pages max):**

During our team's review, we were given mostly positive feedback at the current stage of our project. All of our P1 functions work correctly with very few issues. The class CTO emphasized the importance of alerts on both the companies GUI and the Students GUI, along with correcting the way we search for job posts. When a user searches with no key word values, it should return all the postings available. We have corrected the search issue to allow a blank entry and return all posts. Some of our smaller issues consist of rendering the pdf (resume) files to be displayed in the front end of the application along with alerts that notify the users of when they have successfully registered, applied and received new applicants. When checking our database and communication with the application, we have completed all expectations along with proper deployment of our application. The app works on more than two kinds of browsers and all functionality works correctly when using the product on a mobile version.

### **List of tasks the team chose to focus on and implement (1 page max):**

1. Rendering PDF (Resume) (Showing applicants resume in front end)
2. Creating Alerts to Notify Job seekers and Companies
3. Styling the application with CSS
4. Security (Field Validation, Correct Logins)

### **List of P1 functions agreed at the meeting:**

All of our team's P1 functions have been completed. Users are allowed to create and apply to posts along with create accounts and filter through posts based on the 9 job areas. We need to make some slight modifications to how the search works but overall, As we finish the above tasks, our project will be complete.
